

List of Tables

- Table 1-1. Target Ecosystem Characteristics for the Hudson-Raritan Estuary Ecosystem Restoration Study
- Table 1-2. Short-Term and Long-Term Objectives for Target Ecosystem Characteristics (TECs) in the Hudson-Raritan Estuary (HRE) study area.
- Table 2-1. Restoration Programs and Projects in the HRE study area.
- Table 3-1. Short-Term and Long-Term Objectives for Target Ecosystem Characteristics (TECs) in the Hudson-Raritan Estuary (HRE) study area, including a list of ecosystem services offered by each TEC.
- Table 3-2. Islands of the HRE study area that are surveyed as part of the Harbor Herons program, including acreage, distance to either freshwater or coastal wetland habitat, and the number of nests identified during the 2007 Harbor Herons Nesting Survey.
- Table 3-3. Coastal and maritime communities that may be possible to create in the HRE study area (adapted from Edinger et al. [2002] and Reschke [1990]).
- Table 3-4. Areas of habitat and linear distance of man-made shoreline that could be restored in the HRE study area.
- Table 3-5. Critical Habitats and Hypothetical TEC Mosaics for Select Species in the Hudson-Raritan Estuary Study Area.
- Table 3-6. Designated best use classes for surface water use in estuaries in the states of New Jersey and New York.
- Table 3-7. Properties of the aquatic environment important in predicting the fate and transport of a contaminant (adapted from Rand [1995]).
- Table 4-1. CRP Restoration Sites tallied by Hudson-Raritan Estuary Planning Region and Target Ecosystem Characteristic
- Table 5-1. Select Federal agencies and activities related to the watershed planning process.
- Table 5-2. Observed high, median, and low costs of conducting restoration for selected Target Ecosystem Characteristics.
- Table 5-3. Restoration Authorities in the Hudson-Raritan Estuary Study Area.
